

What Is Claimed Is:

1 1. A display device for use in a game machine which
2 includes a variable display device for variably
3 displaying a plurality of symbols and provides a bonus
4 to a player when a predetermined winning combination
5 of symbols is achieved along any one of winning lines
6 of the variable display device when variable displays
7 of the variable display device are stopped,

8 the display device comprising:

9 an indicator;

10 a recording medium having recorded therein a
11 plurality of display content information items which
12 can be displayed on the indicator;

13 a display content selector which selects display
14 contents to be displayed on the indicator by manual
15 operation; and

16 a display control device, which reads out, from
17 the recording medium, display content information
18 corresponding to the display content selected by the
19 display content selector, and which displays the
20 display contents on the indicator on the basis of the
21 display content information.

1 2. The display device of claim 1, wherein the display
2 content selector is located at a position where a player,
3 who plays a game by using the game machine, can actuate
4 the display content selector.

3. The display device of claim 1, wherein the display content selector has a user operation prevention device for preventing actuation by a user of the game machine.

4. A game machine, comprising:
a variable display device which variably displays
a plurality of symbols, and has winning lines;

a variable display stop device which stops
variable display of the variable display device,

wherein a bonus is supplied to a player when a predetermined winning combination of symbols is achieved along any one of the winning lines of the variable display device at a time variable displays of the variable display device are stopped; and

a display device for providing images with the player, the display device including:

an indicator,

a recording medium having recorded therein a plurality of display content information items which can be displayed on the indicator,

a display content selector which selects display contents to be displayed on the indicator by manual operation, and

a display control device, which reads out, from the recording medium, display content information corresponding to the display content

00027250.001301

23 selected by the display content selector, and which
24 displays the display contents on the indicator on the
25 basis of the display content information.

1 5. The game machine of claim 4, wherein the variable
2 display stop device is actuated by a player.

1 6. The game machine of claim 4, wherein the display
2 content selector is located at a position where a player,
3 who plays a game by using the game machine, can actuate
4 the display content selector.

1 7. The game machine of claim 4, wherein the display
2 content selector has a user operation prevention device
3 for preventing actuation by a user of the game machine.
